

Your benefits

- + You can rely on consistently high quality as well as excellent service and support by our team.
- + Thanks to the central location of the Sappi EHINGEN production site, our products can be delivered quickly within Europe. The shorter transport routes minimise the CO₂ footprint and protect the environment. The shorter production cycles in turn ensure high availability and short lead times.
- + With Sappi you are putting your trust in a sustainable partner with reliable worldwide availability.

Did you know?

In permanent recycling use, already recycled paper and board material is subject to progressive quality weakening. Therefore, a certain amount of virgin fibre must be regularly fed into the cycle. Sappi's high-quality fresh fibre liners make a valuable contribution by maintaining the quality of the recycled substrate.

Fusion

Topliner and Nature Plus

Discover brilliant corrugated solutions.

Printed on Sappi Magna Silk 170 g/m² © Sappi Europe

sappi

Discover endless possibilities

Fusion Nature Plus perfectly complements the proven **Fusion Topliner**. The interaction of these two excellent products opens up completely new possibilities in the corrugated packaging industry. Brand manufacturers, corrugated board converters, display and folding carton manufacturers and designers benefit from the versatility of the expanded Fusion portfolio. It enables holistic use and a consistent brand strategy, as it can be used as a topline, fluting and innerliner.

Both materials can be used for many applications, such as consumer packaging, shelf-ready packaging, promotional material and much more. The expanded Fusion portfolio can also be used to make shopping bags.

Highlight your products.

Fusion Topliner

Increase the impact of your corrugated board application

The Sappi **Fusion Topliner** was designed for premium corrugated board applications. Sappi's innovative concept is based on virgin fibre and guarantees a unique look with excellent mechanical properties for a wide variety of applications.

Applications

- Consumer packaging
- Shelf-ready packaging
- Agricultural products
- Frozen food packaging
- Fast food packaging
- Non-food applications
- Displays POS material
- Gift boxes
- Game and puzzle boxes
- Promotional material
- Shopping bags

Product specifications for Fusion Topliner

Characteristics	Print Process	Conversion process	Grammages (g/m ²)	Sheets/Reels
Front side double coated, functional reverse side coating	*flexo, offset, digital (pre- and postprint)	Corrugated board conversion, shopping bags production	90, 100**, 115, 135, 160, 180	Available in sheets and reels

**Special grammage

Features

- High brightness, smoothness and print gloss
- High stability without cracking at the folds
- Superior lamination and mechanical properties
- Taint and odour neutral
- Suitable for food packaging, safety of toys (DIN EN71) and sensitive goods
- Excellent finishing results
- Unique coating, suitable for all printing processes*
- Fast ink drying

Benefits

- Outstanding print results through enhanced colour reproduction and printability
- Reduced washboarding effect
- Higher shelf impact
- Offers cost saving opportunities:
 - Weight reduction
 - Glue savings (up to 75%)
 - Increased runability and processing efficiency
- Consistent high quality
- Short lead times and customised service concepts
- Sustainable partner with reliable worldwide availability

Applications

- Consumer packaging
- Shelf-ready packaging
- Inlays for perfume and confectionary boxes
- Innerliner applications with high demands on brightness or print quality (e-commerce – “unboxing experience”)
- Agricultural products
- Food packaging
- Non-food applications
- Promotional material
- Shopping bags
